Andrian Karsanashvili

Personal Data

Position: Senior Front-End Engineer
Experience: 3+ years
Age: 21 years
Location: L'viv, Ukraine
LinkedIn & GitHub: /andrian-kars

Soft Skills

- Adaptability
- Ability to fast-learning
- Analytical Understanding
- Attention to details
- Critical Thinking
- Good Communication and Teamwork
- Self-Confidence and &-Motivation
- Stress Management and Patience
- Flexibility

Me, Myself & I

Solid experience in multiple projects in all phases of the development life cycle, and improvement of them.
For the projects, I participate in, I adapt quickly and start being helpful rapidly.
My development skills shine as I did not fail even a single task.
It takes me a couple of breaths of time to learn new technology.
I help less mature engineers advance to the next level of their skills and career.

Hard Skills

- React.js + Redux (Pure or RTK)
- JavaScript / TypeScript (Types and Abstraction)
- HTML / CSS (SCSS, Modules, CSS in JS)
- Git + GitLab / GitHub
- Build tools: Webpack / Gulp
- Unit testing with Jest, RTL
- Algorithms, Data Structures
- Architecture, Optimization, Security
- Paradigms, Patterns, Principles
- CI/CD (Linting, testing, deploying)
- Http(s), Rest APIs, Web Sockets
- SDLC with Agile Scrum, Kanban or Waterfall
- Bootstrap, jQuery, Axios, Formik, yup, etc.
- Package Managers: Yarn / NPM
- Mockups: Photoshop / Figma / XD

Languages

English	–	**C2**

Recent Experience

- **EPAM Systems** *Feb 2021 – Till Now*

  EPAM is an outsourcing company that provides engineering services to its clients. Some of the responsibilities I had:

  * Optimization of webpack pipeline for faster builds. Reducing 'webpack build' from 40 to 15-18 seconds.

  * Proposing to the Client multiple different ways to improve the already existing solution. With detailed pros and cons for each one.

  * Application architecture creation. Refactoring already written code to use Redux, the connection of architecture levels, implementation of clean patterns.

  * Reusable, optimized components creation. Sharing those components across other products. Helping to improve components built by other teams.

  * Finding, configuring, and applying libraries according to the business, and team requirements.

  * Optimization of the application to load it quicker. When the app started, it had nine renders. After implementing my ideas, the number is one.

  * Reordering the folder structure. I changed the folder structure for the whole app. So, it has become easier to navigate and understand.

  * Helping to improve build-in processes, so developers could spend more time coding instead of thinking about what to do.

  * CSS styling of UI component. The styling was not easy. Because it was made in IE8 and quirks mode. I should have been carefully counting the weight of the selectors and following all the demands.

  * Converting VBScript into JavaScript. Helping an old application to become browser agnostic and not only be dependent on IE.

  More than a year ago, I passed the English assessment for the C1+ grade. Since that time, my English has tremendously improved

  I quickly grew up from Middle and passed the certified assessment to become a Senior Software Engineer

  Not only I'm a great Engineer. I help my colleagues to become better at development. Teach people coding from the start and help them to get into Web Development. My success rate at mentoring is 100%
