Andrian Karsanashvili

Personal Data

Position: Senior Front-End Engineer

Experience: 4+ years

Location: L'viv, Ukraine

LinkedIn & GitHub: /andrian-kars

Soft Skills

- Adaptability
- Ability to fast-learning
- Analytical Understanding
- Attention to details
- Critical Thinking
- Good Communication and Teamwork
- Self-Confidence and &-Motivation
- Stress Management and Patience
- Flexibility

Me, Myself & I

I have solid experience working on multiple projects across all phases of the development life cycle, with a proven track record of successfully delivering projects on time and on budget.

*M*y focus is on achieving architectural excellence and high code quality.

I am skilled in customer communication and have established flexible development processes with continuous improvement.

*M*y experience has shown that I can quickly adapt to new projects, and my development skills have been demonstrated by never failing to complete a task.

Hard Skills

- React.js + Redux / MobX / Context(w. useState)
- JavaScript / TypeScript (Types and Abstraction)
- Node.js + Express
- HTML / CSS (SCSS, Modules, CSS in JS)
- Git + GitLab / GitHub
- Build tools: Webpack / Vite / Gulp
- Unit testing with Jest, RTL
- Algorithms, Data Structures
- Architecture, Optimization, Security
- Paradigms, Patterns, Principles
- CI/CD (Linting, testing, deploying)
- Http(s), Rest APIs, Web Sockets
- SDLC with Agile Scrum, Kanban or Waterfall
- Bootstrap, jQuery, Axios, Formik, yup, etc.
- Package Managers: Yarn / NPM
- Mockups: Photoshop / Figma / XD

Languages

English – C2

German – C1+

Recent Experience

EPAM Systems *Feb 2021 - Present*

At EPAM, an outsourcing company providing engineering services, I was responsible for a variety of tasks, including:

* Optimizing the webpack pipeline to achieve faster builds, reducing the time for 'webpack build' from 40 to 15-18 seconds
* Suggesting multiple different ways to improve existing solutions for clients, providing detailed pros and cons for each option
* Creating application architectures and refactoring existing code to utilize Redux, connecting architecture levels, and implementing clean patterns
* Developing reusable, optimized components that are shared across multiple products and improving components built by other teams
* Finding, configuring, and applying libraries based on business and team requirements
* Optimizing the application to load more quickly, reducing the number of renders from nine to one
* Rearranging the folder structure for the entire application to improve navigation and comprehension
* Improving build-in processes to allow developers to focus on coding
* Styling UI components using CSS, which was challenging due to its previous creation in IE8 and quirks mode; I carefully calculated the weight of the selectors and met all requirements
* Converting VBScript to JavaScript to make an old application cross-browser compatible and reduce its dependence on IE

Freelance *Mar 2019 - Feb 2021*

I have collaborated with multiple teams on various creative projects, during which I have gained extensive experience in a range of activities, including:

* Regularly communicating with clients to ensure their business needs are met
* Working alongside experienced engineers to create complex React applications
* Developing API endpoints with authorization capabilities
* Building multiple React applications from scratch and overseeing their deployment
* Conducting SEO optimization on both HTML pages and React apps
* Converting HTML coding templates into WordPress themes
* Designing and developing modern, browser- and device-agnostic HTML websites
* Creating, configuring, and launching WordPress websites
