PROFESSIONAL SUMMARY

Senior full-stack engineer with 7+ years of experience, focused on **React and TypeScript** front ends, with Node.js/NestJS, C# and ASP.NET Core on the back end. At EPAM for Vertafore since 2021: defined the React migration approach for a 30-year-old, 1,000+ page product used by tens of insurance agencies, the largest with up to **100,000 users**, and proposed a token-management change completed in **6 months against an 18-month estimate**. Configures AI-assisted development with GitHub Copilot and Claude under human review. Mentors engineers from junior to senior and coaches teams on development practices and Agile workflows. Available immediately, no notice period.

CORE COMPETENCIES

React & TypeScript | Node.js, NestJS & PostgreSQL | C# & ASP.NET Core | Front-End Architecture | Reusable Component Libraries | Docker, GitLab CI/CD & AWS | Jest, React Testing Library & Playwright | AI-Assisted Development

WORK EXPERIENCE

EPAM Systems

Jul 2026 - Present

Senior Full-Stack Developer - Sagitta

Client: Vertafore

- Returned to accelerate the React migration of a product with more than 1,000 pages, building on the earlier foundation and existing React pages.
- With the team, generalized the Agency One components already adapted for Sagitta, encapsulating application logic as well as UI for reusable schema-driven forms, grids, bulk actions and API integration.
- Configured GitHub Copilot agents and repository instructions for legacy analysis, design, implementation and review, with build and test checks, human review gates and reports for product owners and developers.
- Combined a stronger shared foundation with AI-assisted development to reduce typical page delivery time, including testing and review, from **about a month to between a few days and three weeks**, depending on complexity.
- Implemented masked credential reveal and replacement, claims-based permissions and MFA configuration; corrected C# and ASP.NET Core APIs and data mappings, and improved React Query caching and persisted table preferences.
- Added Jest and React Testing Library unit and regression tests for forms, secure fields, grids and bulk actions, preserving legacy business rules.

EPAM Systems

May 2025 - Jul 2026

Senior Full-Stack Developer - Import Tool & Certificates Platform

Client: Vertafore

- Started with front-end architecture consulting on Import Tool: assessed the design, delivered improvements and a prioritized roadmap, then collaborated with engineers to integrate it with Certificates Platform.
- Built Node.js/NestJS API endpoints and worked with the PostgreSQL database behind them, including blob storage for certificate documents. Both tools serve all Vertafore products, a much larger customer base than Sagitta alone.
- Owned document generation, download and import handling, and in-app PDF previews, stabilizing failures across the flow. Coordinated AI-assisted Playwright end-to-end test improvements and code reviews across teams.
- Set up and maintained the Docker containers, keeping Node.js, npm and Yarn versions consistent across environments.

EPAM Systems

Jan 2024 - May 2025

Senior Front-End Developer - Agency One

Client: Vertafore

- Built a reusable component library shared across all Vertafore products, including editable drawers and paginated grids, in a stack of React and TypeScript with Node.js/NestJS services, PostgreSQL and Docker.
- Created shared top navigation that products integrated with their authentication token, enabling cross-product navigation without another login and carrying customer and policy context.

EPAM Systems

Feb 2021 - Jan 2024

Full-Stack Engineer - Sagitta

Client: Vertafore

- Challenged token management in the ASP business layer that would break refresh and browser navigation. The revised approach took **6 months against an 18-month estimate**, saving a year for seven teams of five engineers across Ukraine, India and the US while preserving browser behavior.
- Defined the VBScript conversion and React migration approaches for a 30-year-old, IE-only product with 1,000+ pages. Built the first pages, resolved CSS compatibility issues and refreshed the design, establishing patterns that other teams could use to continue the work.
- Cut the GitLab CI/CD pipeline from **about 65 minutes to about 20 minutes**. Separately, reduced build times from about 40 seconds to 15-18 seconds through Webpack and tooling changes.
- Reorganized the frontend architecture and Redux state flows, reducing redundant renders from **nine to one**, then initiated the React migration.
- Shipped C#/.NET API endpoints and hotfixes for a product used by tens of agencies, the largest with up to **100,000 users**, with performance tests run for that load. Contributed to integration with the legacy Rocket UniVerse database and maintained the existing AWS setup.
- Handled production escalations with fast, solid fixes, and supported quarterly release stabilization. Cleaned up logging so that only the important information remained.

Self-employed

Mar 2019 - Feb 2021

Independent Software Engineer

Project-based client work

- Delivered React and Node.js applications end to end with Express or NestJS and MongoDB, including API integrations, authentication and deployment workflows. Hosted an Express video streaming application on AWS EC2.
- Worked directly with clients to define requirements and prioritize delivery, and built responsive marketing and e-commerce sites, including custom WordPress themes.

EDUCATION

Software Engineering (Bachelor's studies, not completed) Ivan Franko National University of Lviv — 2020

Senior Engineer Growth Program EPAM Systems — 2022

SKILLS

Front end: React, TypeScript, JavaScript, HTML, Next.js, Redux Toolkit, TanStack Query (React Query), React Router, Formik, Yup, SCSS, CSS Modules, internationalization (i18n) and localization

Back end: Node.js, NestJS, Express, C#, .NET, ASP.NET Core, REST APIs, OAuth, JWT

Databases: PostgreSQL, MongoDB, blob storage, Rocket UniVerse (legacy integration)

Cloud and delivery: Amazon Web Services (AWS, EC2), Docker, GitLab CI/CD, Git, Vite, Webpack

Testing: Jest, React Testing Library, Playwright, unit, regression and end-to-end testing

AI-assisted engineering: GitHub Copilot, Claude, custom agents, multi-agent workflows, repository instructions, human review gates

Methodologies: Agile, Scrum, code review, mentoring

Languages: Ukrainian (Native), English (Fluent), German (Proficient), Japanese (Beginner); written Spanish via chat or email with AI-assisted translation
