Open to roles in Spain and across Europe.

PROFESSIONAL SUMMARY

Senior full-stack engineer with 7+ years of experience across enterprise insurance software and client applications. Builds interfaces with React and TypeScript and services with C# and ASP.NET Core, with additional Node.js and NestJS experience. Combines legacy modernization, reusable UI architecture and cross-layer debugging with hands-on AI-agent configuration for analysis, implementation, testing and stakeholder review.

Key results: token-management change I proposed delivered in 6 months against an 18-month estimate, saving a year of work for seven teams; CI/CD pipeline over 200% faster; build times cut from about 40 seconds to 15–18 seconds; redundant UI renders cut from nine to one.

TECHNICAL SKILLS

Front end: React, TypeScript, JavaScript, HTML, Next.js, Redux Toolkit, TanStack Query (React Query), Formik, Yup, SCSS, CSS Modules

Back end: C#, .NET, ASP.NET Core, REST APIs, Node.js, NestJS, Express, OAuth, JWT, legacy database integration

Cloud and delivery: AWS, GitLab, Git, CI/CD, Vite, Webpack

Testing: Jest, React Testing Library, Playwright, unit, regression and end-to-end testing

AI-assisted engineering: GitHub Copilot, custom agents, multi-agent workflows, reusable prompts, repository instructions, human review gates

Methodologies: Agile, Scrum, Waterfall, code review, mentoring

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer — EPAM Systems | Sep 2025 - Present

Sagitta modernization and AI-assisted delivery

- Modernized legacy ASP administration workflows with React and TypeScript: validated and schema-driven forms, editable drawers and paginated, searchable grids that preserve existing business rules.
- Developed and corrected C# and ASP.NET Core API behavior, repository logic and data mappings for legacy database integration, fixing save failures, date conversion and inconsistent field values.
- Strengthened security flows: masked credential reveal and replacement with re-locking after save, claims-based UI permissions and multi-factor authentication configuration.
- Improved React Query cache handling and server-persisted table preferences, fixing stale post-save values, selection state and grid settings; extracted shared bulk-delete hooks and API helpers.
- Configured GitHub Copilot agents and reusable instructions for legacy analysis, full-stack design, implementation and review, with explicit handoffs and build and test checks.
- Set up AI-assisted requirements comparison with parallel legacy and React analysis, human review gates and separate product-owner and developer reports on requirement gaps and UX changes.
- Added unit and regression tests for form validation, secure fields, grid behavior and bulk actions with Jest and React Testing Library.

Certificates Platform

- Owned certificate delivery workflows end to end, including document generation, download and import handling and in-app PDF previews; stabilized failures across the flow.
- Coordinated AI-assisted Playwright end-to-end test improvements and code reviews across teams to strengthen release quality.

Front-End Architecture Consultant — EPAM Systems | Aug 2025 - Sep 2025

Import Tool

- Assessed the front-end architecture, delivered targeted improvements and provided a prioritized roadmap for a more resilient release.

Senior Front-End Developer — EPAM Systems | Jun 2024 - Aug 2025

Agency One

- Developed a reusable component library shared across products, improving UI consistency and reducing duplicated implementation work.
- Evaluated and integrated third-party libraries against product requirements, maintainability and team needs.

Full-Stack Engineer — EPAM Systems | Feb 2021 - Jun 2024

Sagitta

- Challenged an agreed token-management approach that kept tokens in the ASP business layer, so page refresh and browser back and forward navigation lost them; the standard approach I proposed was delivered in 6 months against an 18-month estimate, saving a year of work for seven teams.
- Improved CI/CD pipeline speed by over 200% and reduced build times from approximately 40 seconds to 15–18 seconds by reworking Webpack configuration and build tooling.
- Improved front-end performance by reducing redundant UI renders from nine to one, standardizing Redux state flows and reorganizing the front-end architecture.
- Shipped API endpoints and hotfixes, contributed to legacy database integration, and improved logging and validation to address cross-layer defects.
- Kept a 30-year-old, IE-only product with 1,000+ pages usable in modern browsers: migrated VBScript to cross-browser JavaScript, stabilized legacy CSS and updated the visual design ahead of its React migration.

Cross-project contribution: Mentored engineers across experience levels, supporting onboarding and stronger code quality.

Independent Software Engineer — Self-employed | Mar 2019 - Feb 2021

Project-based client work

- Delivered React and Node.js applications end to end, including API integrations, authentication and deployment workflows.
- Built responsive marketing and e-commerce sites, including custom WordPress themes and CMS configuration.
- Worked directly with clients to define requirements, prioritize delivery and improve sites after launch, including SEO work.

EDUCATION & PROFESSIONAL DEVELOPMENT

Software Engineering (Bachelor's studies, not completed) — Ivan Franko National University of Lviv | 2020

Senior Engineer Growth Program — EPAM Systems | 2022

LANGUAGES

English — Fluent | German — Proficient | Japanese — Beginner

Working language: English. Written communication in Spanish via chat or email with AI-assisted translation.
